

Title	Environmental Planning Instrument - Referral Area
Alternative title(s)	EPI - Referral Area
Abstract	The data represents the Referral Area for Environmental Planning Instrument.
Resource locator

Version	1.1
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/039eb49d-6ee6-4329-955e-cd2ceaf19b34
Purpose	The aims of this Policy are as follows:(a) to provide a consistent planning regime for the development and delivery of infrastructure on land,(b) to allow the efficient development, re-development and protection of land,(c) to identify certain development within the Lease Area as exempt development or complying development,(d) to specify matters to be considered in determining whether to grant consent to development,(e) to provide for development that does not, by its nature or scale, constitute an actual or potential obstruction or hazard to aircraft,(f) to identify certain development as State significant development or State significant infrastructure,(g) to ensure that land around the Lease Area is maintained for port-related and industrial uses, including heavy industry on land.

Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
