Title	Lachlan riparian priority project 2005 and 2009-2010		
Abstract	The Lachlan Riparian Priority Project (LRPP) was formulated to identify, assess and prioritise degradation and threatening processes to aquatic and riparian areas in the Lachlan Catchment. The LRPP was designed with three objectives: mapping existing riparian vegetation in the upper Lachlan Catchment, identifying threatening processes to existing riparian vegetation, and developing priorities for riparian vegetation management.

Lineage Mapping for the Lachlan Riparian Priority Project (LRPP) was carried out in two stages these being Stage 1 (2005) and Stage 2 (2010). The dataset described in this metadata statement is the result of the amalgamation of these two spatial layers. The process of amalgamation and Quality Assurance (QA) was extensive, resulting in a spatial product which differs to the two spatial layers on which they are based. The scope of the project only allowed for the mapping of named streams extracted from the Topo Hydro layer from the Enterprise Database (EDB) layer.
