

Title	Environmental Planning Instrument - Dwelling Density
Alternative title(s)	EPI - RDN
Abstract	This spatial dataset identifies the maximum density of dwellings on certain land. Development for the purposes of residential accommodation on land is subject to an "Additional Local Provision" which can be found in Part 6 or Part 7 of the Local Environment Plan (LEP). The maximum density may be established as either a maximum number of dwellings in total for an area or a maximum ratio of dwellings to land size Contact data.broker@environment.nsw.gov.au for a data package (shapefile).

Lineage	This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant LEP datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur
