

Title	Bathurst Urban Hydrogeological Landscapes: June 2011 (First Edition)
Alternative title(s)	Bathurst Urban HGLs
Abstract	<p>The Hydrogeological Landscape (HGL) concept provides a structure for the understanding of how salinity manifests itself in the landscape and how differences in salinity are expressed across the landscape. A HGL spatially defines areas of similar salt stores and pathways for salt mobilisation. The process of HGL determination relies on the integration of a number of factors: geology, soils, slope, regolith depth, and climate; an understanding of the differences in salinity development; and the impacts (land salinity/salt load/water electrical conductivity) in landscapes. Information sources such as soils maps, site characterisation, salinity site mapping, hydrogeological conditions and surface and groundwater data are combined to develop standard templates for each HGL. The focus of this package is the Bathurst urban area managed by the Bathurst Regional Council (BRC). This metadata relates to the maps and digital spatial data developed for the project, including derivative maps to assist in land management decision making. This includes information on salinity management from the perspectives of land use design, scales and types of management, landscape function, management strategies, actions and outcomes, as well as land use to be avoided.</p> <p>Spatial resolution for this product is 1:10 000.</p>

Dataset URI	https://datasets.seed.nsw.gov.au/dataset/ae641632-8982-4a49-bf00-9fa73e88b7b0
Purpose	This data package was generated for the Bathurst Regional Council (BRC). It provides a framework to assist in the understanding of landscapes, the variability across the landscape, appropriate management activities and an understanding of salinity impacts in heritage areas. It will allow for more informed decisions leading to better planning and urban development strategic outcomes.
Status	completed
Spatial representation	
Type	vector

Geometric Object Type	complex
Geometric Object Count	0
Spatial reference system	
Authority code	GDA94 / MGAZone 55
Code identifying the spatial reference system	28355
Equivalent scale	1:None
Additional information source	Source datasets: Soil Landscapes of the Bathurst 1:250 000 sheet (OEH); Central West CMA Hydrogeological Landscape Systems (CW CMA); GEODATA TOPO 250K Series 3 (Geoscience Australia); Geophysical Datasets - radiometrics (Geoscience Australia - GADDS); Surface Geology of Australia 1:1 million scale, New South Wales - 2010 edition (Geoscience Australia); Bathurst NSW Regolith-Landform map 1:100 000 (Geoscience Australia); Bathurst 1:250 000 Geological Sheet SI/55-08, second edition (Geoscience Australia/NSW Geological Survey); New South Wales DTDB Landform Theme 50K Digital Terrain Models (Land and Property Management Authority); New South Wales Digital Topographic Database DTDB (Land and Property Management Authority).

Lineage	The hydrogeological landscape (HGL) mapping used the following base data for delineation of map units: published 1:250 000 geological mapping data (polygon); published 1:250 000 soil landscape data (polygon); published 1:100 000 regolith-landform mapping data (polygon); hydrogeological landscape systems data for the Central West CMA area (polygon); Digital Elevation Model (DEM) for the Central West CMA area and derivative products taken from the 25 metre DEM; geophysical (radiometrics) imagery; and field observations and assessment. The published and reconnaissance level mapping were combined and rationalised to create a complete hydrogeological landscape classification (map unit) coverage for the entire Bathurst Urban Study Area.

Constraint set

Use constraints

This data is provided under licence by the Department of Planning, Industry and Environment (DPIE). For further inquiries contact data.broker@environment.nsw.gov.au.

Limitations on public access

Scope dataset

Completeness Commission

Date type revision

Effective date 2011-07-01

Explanation Spatial data capture is complete for presentation and usage at 1:10 000 only.

Completeness Omission

Date type revision

Effective date 2001-01-01

Explanation

Topological Consistency

Date type revision

Effective date 2011-07-01

Explanation All polygons in the coverage are topologically correct and all polygons have been attributed. Data has been visually checked at applicable scales.

Absolute External Positional Accuracy

Date type revision

Effective date 2011-07-01

Explanation The accuracy of the coverage varies across the mapping area as map polygon boundaries were derived from different sources. HGL boundaries derived from published and draft 1:100 000 scale mapping are generally accurate to 100 m. HGL boundaries derived from published 1:250 000 scale mapping are approximate and generally accurate to 250 m. Greater accuracy is achieved through field observations and assessment.

Non Quantitative Attribute Accuracy

Date type revision

Effective date 2011-07-01

Explanation All polygons are labelled with a hydrogeological landscape unit tag, and attributed with information relevant to salinity management. Attributes were checked as part of routine GIS capture quality assurance procedures, including a visual check of polygon tags against field data. During the fieldwork phase, regular meetings were held to discuss and review methods, processes and consistency in landscape interpretation and documentation.
