

Title	Biolandscapes, South Western Slopes, Lachlan Extant. VIS_ID 4124
Alternative title(s)	SWS_LachlanBiolandscapes_E_4124
Abstract	The dataset shows the extant native vegetation as vegetation communities in relation to soil parent material, for an adjusted area of the NSW South Western Slopes (NSS) IBRA bioregion within the Murray, Murrumbidgee and Lachlan CMAs. VIS_ID 4124

Unique resource identifier	
Code	aaa824a4-90b0-4b53-ac99-7ee8d6b366a0
Presentation form	Map digital
Edition	unknown
Dataset language	English
Metadata standard	
Name	ISO 19115
Edition	2016
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/aaa824a4-90b0-4b53-ac99-7ee8d6b366a0
Purpose	To map native vegetation for an adjusted area of the NSW South Western Slopes (NSS) IBRA bioregion within the Murray, Murrumbidgee and Lachlan CMAs.
Status	Completed
Spatial representation	
Type	vector
Spatial reference system	
Code identifying the spatial reference	4283

system	
Equivalent scale	1:None
Additional information source	DECC (2007). The Native Vegetation of the Southern Wheat-Sheep Belt NSW DECC, June 2007
Topic category	
Keyword set	
keyword value	VEGETATION FLORA
Originating controlled vocabulary	
Title	ANZLIC Search Words
Reference date	2008-05-16
Geographic location	
West bounding longitude	146.71838
East bounding longitude	149.48259
North bounding latitude	-34.726055
South bounding latitude	-33.52552
Vertical extent information	
Minimum value	-100
Maximum value	2228
Coordinate reference system	
Authority code	urn:ogc:def:cs:EPSG::
Code identifying the coordinate reference system	5711
Temporal extent	
Begin position	2007-01-01
End position	N/A
Dataset reference date

Lineage The dataset was created using a composite vegetation layer created for Part 4-6 of the report: "The Native Vegetation of the Southern Wheat-Sheep Belt", NSW Department of Environment and Climate Change, June 2007. See report for further discussion of the biolandscape concept.

The composite vegetation data was combined with data for geology/soil parent material. The purpose of this is to delineate disjunctions in vegetation assemblages as they occur in unique, intergrading complexes with boundaries defined by soil parent material. For information on source data, see Table 4 in the report Part 4.

For further information about the composite vegetation data, see also the metadata for the Murray and Murrumbidgee pre1750 and extant datasets, and the report parts 2-3. Further information is also available in the metadata statement: "Combined Vegetation Layer for Murrumbidgee Region", Wil Allen, 12 June 2007

For Lachlan, the dataset uses the vegetation mapping layer provided by the Lachlan CMA. The report for this data is: "Reconstructed and Extant Distribution of Native Vegetation in the Lachlan Catchment", Department of Environment and Conservation, Information and Assessment Section, North-West Branch, Dubbo. May, 2006

Attribute fields:

- FID: Internal feature number
- Shape: Feature geometry
- VEG_LNDSCP: The combination of geology/soil parent material and vegetation class (as it occurs in the CLASS-field).
- SOURCE_FLE: Source dataset of record; see also report Table 4 in Part 5.
- ORGNL_POLY: Code carried over from geological mapping sources
- Min_Bvt_la: The vegetation community
- Min_Keith_: The vegetation class
- Min_Keith1: The vegetation formation
- Min_Label_: Source dataset of record
- Min_Source: Source dataset of record
- Source_072: The original regional vegetation mapping source of the record
- Veg_id_072: The original vegetation code given in the source mapping
- Label_092: The new vegetation community name (PVP type) from composite regional vegetation map
- Dk_no2: The vegetation class code (Keith)
- Dk_name2: The vegetation class name (Keith)
- Dk_broad2: The broad vegetation group name (Keith)
- Dk_no_nam2: The vegetation class number and name (Keith)
- CLASS: The vegetation class name adopted for the report (consistent with Lachlan class names)
- Area_Ha: Hectares
