

Title	Eastern Bushlands Database VIS_ID 622
Alternative title(s)	south_ebd_VISmap_622
Abstract	"Eastern Bushlands Database - Southern Region. ; Holme, L. (1993). Eastern Bushlands Database Project (Central Region). NSW NPWS internal unpublished document. ; Broadscale Structural Vegetation mapping covering the eastern portion of NSW. The EBDB provides a broadscale management tool for conservation planning and decision making for purposes including stratifying field survey effort, regional planning, baseline estimation of clearing or regrowth rates, and as input to state-wide forest cover datasets.; ; Data was captured as part of the Save the Bush funded Eastern Bushlands Database project. The dataset consists of three complete portions covering eastern NSW - Northern, Southern and Central. The three separate datasets are similar but not enough to enable combining of them. Data should not be used at scales finer than 1:250 000.; ; Mapped using visual interpretation of Landsat TM satellite imagery. Attribute mapping includes structural vegetation information. Linework derived by visual interpretation of hardcopy Landsat TM imagery printed at 1:100 000. Polygons attributed by combination of visual interpretation and low intensity field work. Higher level of detail mapped in the Central Region, with a total of 53,592 polygons mapped (23,099 ,10 ha) as compared to the Southern Region (13,400 polygons mapped, 1,822 ,10 ha) and the Northern region (36,204 polygons mapped, 9,916 ,10 ha)."; ; VIS_ID 622; ; ANZNS0208000011

Lineage

Data was captured as part of the Save the Bush funded Eastern Bushlands Database project. Linework derived by visual interpretation of hardcopy Landsat TM imagery printed at 1:100 000. Polygon's attributed by combination of visual interpretation and low intensity field work. Three separate datasets are similar but inadequate in enabling combination. Digitised in ERMS. Data then transferred into ARC/INFO. Three datasets stored and managed separately. These three datasets then converted to 100 metre cell grids and merged together with their individual attributes of Description and Vegtype maintained. This whole datasets then clipped to an area 100km West and 10 km East of coastline.
