<b>Purpose</b>	To ensure that - (a) any development will have a neutral or beneficial impact on the quality of the water in the bulk water supply infrastructure shown on the Bulk Water Supply Infrastructure Map, and (b) any development will not impact on the integrity or security of the bulk water supply infrastructure, and (c) any development will not increase the risk of illegal access to the bulk water supply or security of the bulk water supply infrastructure, and (d) access to bulk water supply infrastructure for maintenance and operation activities by Water NSW and Sydney Water Corporation will not be impeded by the development.

Lineage	This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website ( <a href="http://www.legislation.nsw.gov.au">www.legislation.nsw.gov.au</a> ). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
