

Title	High Ecological Value Waterways and Water Dependent Ecosystems - NORTHERN BEACHES LGA
Alternative title(s)	HEVwater NORTHERN BEACHES LGA
Abstract	<p>A map of the high ecological value waterways and water dependent ecosystems for the Northern Beaches LGA was prepared by the Science Division of the Department of Planning, Industry and Environment and the Northern Beaches Council, with input layers and support for the map provided by the former NSW Department of Primary Industries-Fisheries and Department of Industry-Crown Lands and Water. The basis for the map arises from Science Division inputs to strategic planning processes. For example, the map has been included in the Land Use and Infrastructure Implementation Plans for the Wilton (Wilton2040, page 22) and Greater Macarthur (interim plan, page 36) Priority Growth Areas. This map was specifically developed for input to Local Government Local Strategic Planning Statements to support Council's delivery of Strategy 25.1 of the Greater Sydney Region Plan. The map shows areas where waterways and water dependent ecosystems are defined as high ecological value, based on definitions, guidelines and policies under the Environment Protection and Biodiversity Conservation Act 1999, Biodiversity Conservation Act 2016, Fisheries Management Act 1994, Water Management Act 2000, Manly Local Environmental Plan 2013 and the Warringah Development Control Plan 2011. Water dependent ecosystems are defined as wetlands, and flora and fauna that rely on water sources (including groundwater). The map represents an overlay of 39 indicators being used by the State Government to define high value, however, not all 39 indicators will be present in any one LGA. For example, there are 36 indicators making up the map for the Northern Beaches LGA (see Attachment 1 below). A comprehensive field assessment was undertaken to assess the accuracy of the map. This showed that areas identified as high ecological value were accurate to 94%. It should be noted that the individual indicators have not been ground-truthed and it is recommended that field assessments and/or a comparison to local mapping be undertaken prior to any decisions being made. The map was created by initially placing a 1 ha (to correspond with a lot size) hexagon grid over the LGA, and attributing the grid with the area, length and/or frequency of occurrence of high value water dependent ecosystems. The purpose of the map is to identify strategic planning priorities for protecting and improving the health of high value waterways and water dependent ecosystems in the LGA. Once identified, the priorities can be used as a basis for identifying aquatic biodiversity refugia, stream rehabilitation efforts and setting management targets and/or land use planning controls that would protect or improve the health of waterways and water dependent ecosystems so they provide the essential services and functions expected of a cool blue-green corridor.</p>

Limitations on public access

Scope	dataset
DQ Completeness Commission	
Effective date	2019-07-26
Explanation	Dataset from Bionet is based on set date range. Data may contain duplicated sightings for same species within a single location.
DQ Completeness Omission	
Effective date	2019-07-26
Explanation	Dataset for Vegetation may contain absent species. No consistent and single vegetation layer is currently available. Vegetation is derived from multiple sources and dates.
DQ Topological Consistency	
Effective date	2019-07-26
Explanation	Topological characteristics of the dataset is consistent with the source data used to derive the HEVwater products. Geodatabases have been used to ensure some accuracy is maintained throughout the process.
