

Title	Historic Heritage Information Management System (HHIMS) Sites
Alternative title(s)	European Sites
Abstract	<p>The Historic Heritage Information Management System (HHIMS) assists the Environment and Heritage Group (EHG) within the Department of Planning and Environment (DPE) to manage information on over 10,000 heritage items on EHG managed lands, most of which are in national parks and nature reserves. Information from heritage studies and related documents are also included in HHIMS' records about particular sites. HHIMS aids in the protection and management of these sites by maintaining and providing information concerning the nature, current status and location of sites. HHIMS information facilitates inquiries, supports site protection, enables better management and research and provides the secure protection of sensitive cultural and historical information. HHIMS replaced the previous National Parks and Wildlife Service Historic Places Register in August 2002, and enables the Office of Environment and Heritage to meet its obligations under Section 170 of the NSW Heritage Act 1977. For more information see: http://www.environment.nsw.gov.au/licences/HistoricHeritageInformationManagementSystem.htm</p> <p>Note - HHIMS is currently undergoing a quality assurance assessment to improve the reliability and accuracy of the data.</p>

Lineage	Most of the records were captured by on the ground via historic heritage maintenance survey which was undertaken in the late 1990s. Other records, such as those resulting from Regional Forest Agreement process, have not been ground truthed. There a large number of records that use a centroid eg. LGAs, parks, admin areas and these records are subject to a data cleansing process. Note - reports and photos are not able to be stored in HHIMS and so are stored separately in CM9.
