

<b>Title</b>	Horton Falls National Park Vegetation 2009 VIS_ID 4738
<b>Alternative title(s)</b>	HortonFallsNP_2009_E_4738
<b>Abstract</b>	<p>Horton Falls National Park vegetation mapping was undertaken by Dr John T. Hunter in 2009 by contract for the NPWS Northern Tableland Region. Horton Falls CCA Zone 1 National Park is located approximately 25 km west of Barraba and in close proximity of Mount Kaputar National Park.</p> <p>The vegetation of the Horton Falls National Park is described and mapped (scale 1:50000). Four communities are defined based on classification (Kulczynski association). These four communities were mapped based on ground truthing, air photo interpretation and landform.</p> <p>VIS_ID 4738</p>

## Lineage

Dr John T. Hunter prepared the report of the vegetation of the Horton Falls National Park. Aims included the collation of existing information from previous floristic surveys and that the survey of 10, 20 x 20 m stratified full vascular plant floristic sites is carried out in order to complete a comprehensive investigation of the vegetation and flora of Gunyerwarildi. This report represents the findings of this study. The collated information is to be used as a guide for management purposes.

The requirements of the investigation were: 1. Collate existing information from previous vegetation surveys conducted within the conservation areas. 2. Site placement to be based on selected environmental variables and be distributed based on the area they occupy. 3. Identify weed species and their occurrence. 4. Identify RoTAP, EPB&C Act and TSC Act species and their occurrence. 5. Identify regionally significant species. 6. Provide known fire ecology information on species and communities. 7. Construction of a vegetation map based on communities as defined by classification<sup>4</sup> and ordination analyses. 8. Provide management recommendations.
