## Lineage

The results of the multivariate analysis techniques were used in order to circumscribe vegetation communities. The identity of each defined vegetation assemblage was tagged to the full floristic survey sites within the database. The locations of the identified communities and their condition score were then re-projected onto aerial images within ArcMap 9.3. These sites, notes taken on traverses and structural characteristics seen on aerial images along with projected topographical information was used to assist in delineation of vegetation communities for mapping.

## Limitations on public access

Scope dataset

## DQ Completeness Commission

Explanation Complete to Reserve boundary.

## DQ Completeness Omission

Explanation Complete to Reserve boundary.

## DQ Conceptual Consistency

Explanation Adheres to conceptual schema rules for Veg Fire datasets such as this.

## DQ Topological Consistency

Explanation Topologically consistent at 1:25,000 scale as determined from aerial photography.

## DQ Absolute External Positional Accuracy

Explanation Within range at 1:25,000 scale.

## DQ Non Quantitative Attribute Correctness

Explanation Attributes correct for broad Veg Fire datasets such as this.
