Title	Soil and Land Resources of the Merriwa Plateau			
Abstract	This digital soil landscape product contains natural resource mapping for the Merriwa. The Merriwa Plateau is located in the upper Hunter catchment including hills of the Southern Liverpool Ranges; grading to gently sloped plateau around Merriwa. The project was funded by the National Partnership Agreement to provide improved soil and landscape information for this highly productive agricultural area. It has enabled more accurate and better quality Land and Soil Capability and Soil Fertility information to be available for future updates of Biophysical Strategic Agricultural Land (BSAL) mapping under the NSW Strategic Regional Land Use Policy (SRLUP). This resource information will also assist other decision making, planning and environmental modelling throughout the catchment.			
	Forty soil landscape map units have been described for the Merriwa Plateau. Each unit is an inventory of soil and landscape information with relatively uniform land management requirements, allowing major soil and landscape qualities and constraints to be identified. Soils are described using the Australian Soil Classification and the Great Soil Groups systems.			
	Related Datasets: The dataset area is also covered by the mapping of the Soil landscape 1:100 000 and 1:250 000 mapping series for the mapsheets of <u>Dubbo</u> , <u>Singleton</u> , <u>Murrurundi</u> and <u>Blackville</u> . Part of this area is also covered by the mapping of <u>Hydrogeological landscapes of NSW</u> .			
	Online Maps: This and related datasets can be viewed using <u>eSPADE</u> (NSW's soil spatial viewer), which contains a suite of soil and landscape information including soil profile data. Many of these datasets have hot-linked soil reports. An alternative viewer is the <u>SEED Map</u> ; an ideal way to see what other natural resources datasets (e.g. vegetation) are available for this map area.

Lineage	The mapping was upgraded to Soil and Land Resource 1:100,000 scale standard by the NSW Government using:
	 existing published 1:100,000 soil landscape mapping (Blackville and Murrurundi 1:100,000 map sheets). Some minor linework changes were made to the mapping new mapping for parts of Merriwa, Muswellbrook, Gulgong and Coolah, 1:100,000 map sheets
	Traditional soil survey methods and standards were used to produce this soil map product. Information from previous soil and geology surveys were used. Linework was captured by digitizing on screen at approximately 1:10,000 using ArcGIS.
	Provisional soil landscapes were established on the dominant geomorphic processes responsible for the formation of the landscape and on the geological parent material. The boundaries of these soil landscapes were mapped using the interpretation of ADS40 photographs, SPOT satellite imagery, DEM and radiometric imagery.
	Fieldwork was conducted assessing a suite of soil and landscape properties. Dominant sub landscapes classes, their soil types were identified and soil landscape hazards assessed. Over 150 additional detailed soil profiles and observations were collected across the project area to fill knowledge and data gaps. A small subset of samples were also collected for laboratory analysis to support the survey.
Limitations	s on public access

Scope	dataset				
DQ Completeness Commission					
Effective date	2018-03-14				
Explanation	All polygons in the GIS layer are labeled with a unique soil landscape MasterCode (Code) and MasterName (Name), Dominant Geomorphic process group (Process_D) and subdominant geomorphic process group (Process_SD). Pdf report are available for each map unit.				
DQ Completene	DQ Completeness Omission				
Effective date	2018-03-14				
Explanation	Water po	blygons have been removed from the GIS layer.			
DQ Conceptual	Consistency	,			
Effective date	2014-09-05				
Explanation	Map unit concepts and polygons, major soil types and soil landscape descriptions have been field verified by a peer soil scientist for all map units.				
DQ Topological	Consistenc	y .			
Effective date	2014-09-	2014-09-05			
Explanation	ArcGIS was used to ensure all polygons in the shape file are topologically correct. All polygons have a unique identifier.				
DQ Absolute Ex	ternal Positi	onal Accuracy			
Effective date	2014-09-05				
Explanation	Observations and soil profiles were located using a handheld GPS. Soil boundaries of this 1:100,000 scale map product are generally accurate to within 100 m on the ground but variations will occur especially where soil boundaries are gradual.				
DQ Non Quantit	ative Attribu	te Correctness			
Effective date	2014-09-	2014-09-05			
Explanation	Soil landscape map units are individualised by unique combinations of soil type, topography, geology, geomorphic process containing variations in vegetation, land use, existing erosion/land degradation and constraints to development. The land and soil attributes in this product were predominately assessed using field observations, remote sensing interpretation (satellite, radiometric and ADS40) and limited laboratory analysis where available.
