Edition	2016
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/65f570cc-d31c-4cc5-8f21-746e4cec60f7
Purpose	<p>This plan aims:(a) to allow an appropriate range of uses to encourage the adaptive re-use of existing structures while not required for commercial port uses,(b) to identify and protect the heritage significance of the area by establishing a conservation zone and providing appropriate controls for adaptive re-use, demolition and alteration,(c) to ensure that development is compatible with the scale and character of existing built structures in the area,(d) to control the use of the waterways between the wharves to ensure that any activities associated with any development are compatible with the commercial shipping and navigational requirements in Sydney Harbour,(e) to identify a consent authority for development approvals,(f) to identify matters to be considered when determining development applications,(g) to ensure the provision of public access to the waterfront, including the wharves, and (h) to ensure that development:(i) provides appropriate parking facilities and traffic management which minimises impact on the amenity of the area, adjoining residential areas and the Sydney Cove Redevelopment Area,(ii) does not adversely affect the arterial road network in the City of Sydney,(iii) preserves views to and from Sydney Harbour,(iv) is compatible with the adjacent existing residential community, and(v) provides a public transport system</p>

which can be integrated with the existing public transport services in the City of Sydney.

Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
