

Title	The Native Vegetation of North-west Wollemi National Park and Surrounds: Including Nullo Mountain, Coricudgy and Cudgegong (Draft) (OEH, 2012) - VIS ID 3863
Alternative title(s)	WollemiNP_NthWest_v1_E_3863
Abstract	This layer contains digital mapping of the vegetation communities of the North-west Wollemi National Park and surrounds. Derived from Aerial Photographic Interpretation with communities defined using survey and statistical analysis. The layer includes the boundaries of vegetation communities and lists attributes including vegetation community, understorey, disturbance type & severity as described in the report: DECCW (2012) The Native Vegetation of the Sydney Metropolitan Catchment Management Authority Area. Unpublished report by the Office of Environment and Heritage, NSW Department of Premier and Cabinet. ; VIS ID 3863.

Lineage	Linework was derived from 50cm ADS-40 digital imagery for the Mount Pomany and Wallawerang 1;100,000 tiles, flown by the NSW Department of Lands. Linework was drawn and edited manually using ArcGIS 9.2 at a viewing scale of between 1:2000 and 1:15,000.
Limitations on public access	

Scope	dataset
DQ Completeness Commission	
Effective date	2001-01-01
Explanation	This is a draft version of the map, however the linework is complete and all polygons are attributed. Geometry and attribution of some polygons may change in the final version, once the review process has been completed and the layer is merged with adjoining maps of east and southern Wollemi NP.
DQ Completeness Omission	
Effective date	2001-01-01
Explanation	This is a draft version of the map, however the linework is complete and all polygons are attributed. Geometry and attribution of some polygons may change in the final version, once the review process has been completed and the layer is merged with adjoining maps of east and southern Wollemi NP.
DQ Conceptual Consistency	
Explanation	The GIS package (ArcInfo) was used to perform a topological consistency check to detect and fix flaws in the spatial data structure. This check insures that all classified polygons are closed, there are no overlapping polygons, nodes are formed at the intersection of lines and that there is only one label within each polygon.
DQ Topological Consistency	
Explanation	The GIS package (ArcInfo) was used to perform a topological consistency check to detect and fix flaws in the spatial data structure. This check insures that all classified polygons are closed, there are no overlapping polygons, nodes are formed at the intersection of lines and that there is only one label within each polygon.
DQ Absolute External Positional Accuracy	
Explanation	Precision: 10m to 25m Determination: Deductive estimate. Ad-hoc comparisons with 1:25,000 layer data and various sorts of imagery indicated good correlation in terms of shape and size but with errors of the order indicated above in terms of position
DQ Non Quantitative Attribute Correctness	
Explanation	Attributes of the dataset include vegetation community, understorey and disturbance. Vegetation community is determined by aerial photograph interpretation and statistical analysis of quantitative plots with some post mapping fieldwork to check communities, accuracy for each of the attributes is estimated to be high.
