

<b>Title</b>	Vegetation and Floristics of Budelah Nature Reserves. VIS_ID 3974
<b>Alternative title(s)</b>	BudelahNR_2006_E_3974
<b>Abstract</b>	The vegetation and Floristics of Budelah Nature Reserves is described and mapped (scale 1:50 000). Groundtruthing undertaken by NPWS staff have resulted in the identification, of inconsistencies between vegetation communities described and mapped in this dataset and those observed in Budelah Nature reserve. These discrepancies have not been rectified. Seven communities were mapped based on ground truthing, air photo interpretation and landform. Almost all of the reserve is dominated by the Eucalyptus coolabah (Coolibah), Casuarina cristata (Belah) assemblages. Much of the reserve has been disturbed in the past, particularly by clearing for both cropping and grazing. VIS_ID 3974

## Lineage

Seven communities are defined based on classification (Kulczynski association).  
Linework depicting an observed or inferred vegetation type boundary was marked on aerial photograph acetate overlays during stereoscopic interpretation of [colour aerial photography at 1:50,000 scale. Each mapped polygon was assigned to a pre-determined vegetation type (see abstract for vegetation classification details), which was marked on the overlay. Linework was transferred to hardcopy topographic mapsheets, scanned and the images georectified in ArcView 3.3 GIS to give a spatial reference. Then the scanned image was used as a backdrop to digitise linework on-screen. The digital lines were converted to polygons and the shapefile cleaned to remove gaps, overlaps and wayward nodes. A code denoting the vegetation community was then attributed to each polygon based on the hardcopy linework.
